THREATENED SPECIES OF FISH AND LAMPREYS IN SOUTHEASTERN POLAND

Akademia Rolnicza w Krakowie, Wydział Ekonomii w Rzeszowie Zakład Przyrodniczych Podstaw Produkcji Rolniczej 35-601 Rzeszów ul. Ćwiklińskiej 2

ABSTRACT

Changes in the fish fauna of the San and Wisloka Rivers drainage basin were assessed. The extinction of Acipenser sturio and Salmo salar and decrease in the abundance of several other fish species (S. trutta, Alburnoides bipunctatus, Vimba vimba, Chondrostoma nasus, Barbus barbus) were recorded. The main causes of the extinction of certain fish species are water pollution, hydrotechnical constructions in rivers and poaching.
